TECHNICAL PROJECTS

Houston Helper - Frontend Github | Backend Github | Demo
Web app created to help people in need of shelter, food, healthcare, etc., find resources in the city.
+ Built on a Ruby on Rails API backend and React frontend with custom CSS3
+ Created with mixed CRUD functionality for users permissions and resources

Koronmusic.com - Github
Promotional website to advertise a Detroit Hip-Hop and R&B musician.
+ Built with HTML, CSS and Bootstrap
+ Imported audio files from Apple Music

Increase Financial Commission Reports - Private Repo
Internal application to create, track and share agent commission reports throughout the year.
+ Built with the Django framework and custom CSS in static files for styling
+ Created application with full CRUD functionality for company sales
+ Used WeasyPrint to convert commission reports to PDF's

Rando - Github | Demo
RoR site that randomly selects from a list of restaurants and connects the user to google maps for directions.
+ Built completely with Ruby on Rails object-oriented and MVC design pattern
+ Constructed with full CRUD functionality to maintain restaurants listed for the user
